

as guests
of the earth,
we welcome
the world

OUR HOTEL IS COMMITTED TO PRESERVING THE ENVIRONMENT

Our priorities for contributing to the preservation of our natural heritage:

ENERGY

Over 90% of the human economy is based on non-renewable energy resources.

“Use energy-efficient equipment, energy recovery systems, promote use of renewable energy, without losing sight of our primary objective: your comfort.”

WATER

The inhabitants of the planet now use 50% more water than 40 years ago. Meanwhile, water resource available per person has reduced by half.

“Install water efficient equipment, limit water consumption, recycle water when possible and treat waste water.”

OZONE LAYER

The thickness of the ozone layer has decreased by 3% in 25 years.

“Eliminate fluids which cause significant damage to the ozone layer from chillers/fridges, prevent all leaks.”

WASTE

World waste production has increased by 50% in 20 years; currently, 10% of waste is recycled.

“Produce less waste, recycle when possible, improve the elimination of hazardous wastes (batteries, etc.)”

BIODIVERSITY

The acute pressures placed on nature by humankind are leading to the sixth global species-extinction crisis.

“Promote the organic maintenance of planted areas, participate in local preservation activities.”
